

NcedoCare Staff Portal Delivery Pack

Staff-only care coordination portal for nurses, doctors, and admins

This PDF consolidates the final website scope, sitemap, page inventory, React page/component structure, and a practical development build order derived from the approved wireframe direction.

1. Scope Summary

- The website is staff-only and serves nurses, doctors, and administrators.
- Patient onboarding and patient self-service pages are excluded from the web portal scope.
- The portal begins with role-aware staff authentication, then branches into nurse, doctor, and admin workspaces.
- Trust and accountability appear as subtle “verified” or audit-aware touchpoints rather than a standalone blockchain product surface.

2. Sitemap

Auth

- Staff Login
- Forgot Password
- Session Re-authentication
- Access Denied

Nurse Portal

- Dashboard
- Assessment Review
- Completed Reviews
- Escalated Cases
- Override Decision

Doctor Portal

- Dashboard
- Patient Review
- Laboratory Requests
- Discharge Summary
- Completed Consultations

Admin Portal

- Dashboard
- Facility Management
- Staff Management
- Invite Staff

- [Permissions](#)
- [Role Detail / Permission Assignment](#)
- [Audit Logs](#)
- [Monitoring & Analytics](#)
- [Pending / Recent Invites](#)
- [Triage Configuration](#)

Shared Utilities

- [Notification Center](#)
- [Global Case Search](#)
- [Staff Profile / Settings](#)
- [Help / Support](#)
- [Empty State / No Active Cases](#)
- [System Error / Service Unavailable](#)

3. Page Inventory

Page	Role	Route	Priority	Purpose
Staff Login	Shared	/auth/login	P1	Secure role-aware portal entry
Forgot Password	Shared	/auth/forgot-password	P2	Credential recovery
Session Re-authentication	Shared	/auth/reauth	P2	Resume secure session after timeout
Access Denied	Shared	/access-denied	P2	Explain restricted access and safe next step
Nurse Dashboard	Nurse	/nurse/dashboard	P1	Live queue, triage load, fast case access
Nurse Assessment Review	Nurse	/nurse/review/:caseId	P1	Review AI recommendation and decide
Nurse Completed Reviews	Nurse	/nurse/completed	P2	Review completed shift work
Nurse Escalated Cases	Nurse	/nurse/escalated	P2	Track doctor escalations
Nurse Override Decision	Nurse	/nurse/review/:caseId/override	P1	Capture override reason and new urgency
Doctor Dashboard	Doctor	/doctor/dashboard	P1	Manage referred consultations
Doctor Patient Review	Doctor	/doctor/case/:caseId	P1	Consultation workspace with full context
Doctor Laboratory Requests	Doctor	/doctor/case/:caseId/labs	P2	Request and track labs
Doctor Discharge Summary	Doctor	/doctor/case/:caseId/discharge	P2	Finalize discharge instructions and follow-up
Doctor Completed Consultations	Doctor	/doctor/completed	P2	Review closed consultations
Admin Dashboard	Admin	/admin/dashboard	P1	Operational oversight and KPIs
Admin Facility Management	Admin	/admin/facilities	P2	Manage facility setup and routing context
Admin Staff Management	Admin	/admin/staff	P1	Manage workforce accounts
Admin Invite Staff	Admin	/admin/staff/invite	P2	Onboard new staff into the portal
Admin Permissions	Admin	/admin/permissions	P1	Control role-based access
Admin Role Detail	Admin	/admin/roles/:roleId	P2	Fine-grained permission assignment
Admin Audit Logs	Admin	/admin/audit-logs	P1	Review accountability events
Admin Monitoring & Analytics	Admin	/admin/monitoring	P1	Track wait times, overrides, uptime, throughput
Admin Pending / Recent Invites	Admin	/admin/invites	P3	Track invite lifecycle
Admin Triage Configuration	Admin	/admin/triage-config	P1	Configure triage parameters and thresholds
Notification Center	Shared	/notifications	P2	Centralized alerts and review triggers
Global Case Search	Shared	/search	P2	Find cases across workflows
Staff Profile / Settings	Shared	/settings/profile	P2	Security, preferences, accessibility
Help / Support	Shared	/support	P3	Guidance, training, and contact support
Empty State / No Active Cases	Shared	/system/empty	P3	Calm no-data state
System Error / Service Unavailable	Shared	/system/error	P3	Operational fallback when services fail

5. Shared Component Model

- Portal shell: top bar, side navigation, page header, stat strip.
- Clinical workflow blocks: patient summary, AI recommendation card, urgency badge, timeline, decision buttons, verified note.
- Admin operations blocks: filter bar, searchable tables, KPI cards, audit rows, permission matrix, triage configuration panels.
- Support states: empty state, error state, timeout card, access denied card, help panel.
- Trust layer UI: keep accountability visible through subtle verified badges and audit-aware messaging rather than a dedicated blockchain dashboard.

6. Route Map

- /auth/login
- /auth/forgot-password
- /auth/reauth
- /access-denied
- /nurse/dashboard
- /nurse/review/:caseId
- /nurse/completed
- /nurse/escalated
- /nurse/review/:caseId/override
- /doctor/dashboard
- /doctor/case/:caseId
- /doctor/case/:caseId/labs
- /doctor/case/:caseId/discharge
- /doctor/completed
- /admin/dashboard
- /admin/facilities
- /admin/staff
- /admin/staff/invite
- /admin/permissions
- /admin/roles/:roleId
- /admin/audit-logs
- /admin/monitoring
- /admin/invites
- /admin/triage-config
- /notifications
- /search
- /settings/profile
- /support
- /system/empty
- /system/error

7. Recommended Build Order

Phase	Focus	Key Outputs
Sprint 1	Auth shell	Staff login, forgot password, access denied, portal layouts, RBAC route guards
Sprint 2	Nurse core	Nurse dashboard, assessment review, override modal, escalations, completed reviews
Sprint 3	Doctor core	Doctor dashboard, patient review, lab requests, discharge summary, completed consultations
Sprint 4	Admin core	Admin dashboard, staff management, permissions, audit logs, monitoring
Sprint 5	Admin advanced	Facility management, invite flows, role detail, triage configuration

Phase	Focus	Key Outputs
Sprint 6	Shared utilities	Notifications, global search, profile/settings, help/support, empty/error states
Sprint 7	Hardening	Accessibility pass, loading states, QA, security review, performance refinement

8. Notes for Implementation

- Route access should follow RBAC: nurses handle assigned triage cases, doctors handle escalated and consultation flows, and admins focus on operational metrics, staffing, permissions, and audit visibility.
- The human-in-the-loop model should remain explicit in the UI: AI assists, nurses and doctors make final clinical decisions.
- Operational dashboards should prioritize wait times, AI accuracy, override rates, throughput, and uptime because those are named system KPIs.
- Loading, empty, and error states should stay calm and directive rather than alarming.
